

Winter Maintenance Procedure

- ❖ Disconnect all hoses starting with the main feed to the base 3", then release to 2, 2" hoses so that the side pipes can drain.
- ❖ Open the 2" quarter turn valves on the end of the side pipes, if fitted.
- ❖ Disconnect the 3" return pipe from the tank to allow that to drain.
- ❖ Ensure that the power is left on to the panel and all switches to the wash pump and the return pumps are in the off position, this will ensure that the pumphouse heater is functional if fitted.
- ❖ If mains water feed is fitted make sure that it is protected against frost.
